

Project Deliverables — Rubric

Scale

All course rubrics use the same 5–point scale.

Level	Label
4	Exemplary
3	Proficient
2	Developing
1	Emerging
0	Not Acceptable

Dimensions

Five dimensions with unequal weights reflecting the scope of what each assesses.

Dimension	Weight	Competency → Subskill	Evaluates
Deliverable Quality	25%	Critical Thinking → Problem Framing	Completeness, scope alignment, depth of development
Analytical Rigor	25%	Critical Thinking → Research & Analysis, Evidence-Based Reasoning	Evidence base, synthesis, soundness of reasoning
Actionability	25%	Critical Thinking → Prioritization	Practical usefulness, constraint awareness, implementation thinking
Communication	15%	Communication → Written Clarity	Clarity, organization, audience-appropriateness, professionalism
Responsiveness to Feedback	10%	Professionalism → Feedback Reception	Documented iteration based on input received

Dimension 1: Deliverable Quality

Critical Thinking → Problem Framing Evaluates completeness, scope alignment, and depth of development

Level	Descriptor
Exemplary (4)	All components are present and fully developed. The scope reflects thoughtful interpretation of the employer's needs — not just what was literally requested but what would be most useful. Depth of development is consistent across components; no section feels thin relative to the others.
Proficient (3)	All major components requested by the employer are present and developed to sufficient depth. The scope aligns with the project brief. No significant gaps in coverage that would leave the employer without something they expected to receive.
Developing (2)	Most components are present but some are underdeveloped or missing. The scope partially aligns with the project brief but has gaps — the employer would notice something they expected is absent or insufficient.
Emerging (1)	Major components are missing or treated superficially. The scope is misaligned with what the employer asked for, or the work is too thin across the board to constitute a substantive deliverable.
Not Acceptable (0)	No meaningful attempt to produce the requested deliverable. What was submitted does not correspond to the project brief.

Dimension 2: Analytical Rigor

Critical Thinking → Research & Analysis, Evidence-Based Reasoning Evaluates whether the work is grounded in evidence and sound reasoning

Level	Descriptor
Exemplary (4)	Claims and decisions are consistently grounded in relevant evidence. Information from multiple sources or perspectives is synthesized rather than listed. Reasoning is sound throughout. Limitations and assumptions are acknowledged where appropriate.
Proficient (3)	Claims and decisions are supported by relevant evidence. The team draws on appropriate sources for this type of work and connects them to the conclusions reached. Reasoning is generally sound — conclusions follow from the analysis.
Developing (2)	Some claims are supported but others are asserted without grounding. Information may be present but not connected to the conclusions drawn from it. Reasoning has gaps — some decisions or conclusions don't clearly follow from the analysis.
Emerging (1)	Claims and decisions are largely unsupported. Little evidence that the team's conclusions are grounded in any meaningful analysis.
Not Acceptable (0)	No meaningful analysis is present.

Dimension 3: Actionability

Critical Thinking → Prioritization Evaluates whether the employer can act on the work

Level	Descriptor
Exemplary (4)	The work is specific, clearly prioritized, and demonstrates understanding of the employer's constraints — budget, capacity, timeline, organizational context. Implementation guidance or next steps are concrete enough that the employer knows how to move forward.
Proficient (3)	The work is practical and feasible given the employer's context. It reflects awareness of real-world constraints. The employer could act on it with reasonable additional planning.
Developing (2)	The work is partially practical but vague or impractical in places. Constraints are acknowledged but not fully integrated into what's being proposed. The employer would need significant additional work to act on it.
Emerging (1)	The work is largely impractical or unrealistic. Little evidence that real-world constraints were considered. It reads as an exercise rather than something designed for use.
Not Acceptable (0)	Nothing actionable is present.

Dimension 4: Communication

Communication → Written Clarity Evaluates the deliverable as a professional artifact

Level	Descriptor
Exemplary (4)	The deliverable is clear, well-organized, and cohesive — it reads as a unified package despite being produced by a team. Presentation is appropriately calibrated for the employer audience. Formatting enhances usability. The deliverable is polished enough to share with external stakeholders without reservation.
Proficient (3)	The deliverable is organized, understandable, and appropriate for the employer audience. Information is easy to find and follow. Formatting and presentation support readability. Minor errors or inconsistencies do not impede understanding.
Developing (2)	Organization is uneven or parts of the deliverable lack clarity. Components may feel disconnected — produced separately and not fully integrated. Tone or level of detail may be inconsistent across sections. Formatting inconsistencies are noticeable.

Emerging (1)	The deliverable is difficult to navigate or understand. Organization is unclear. Errors or unclear presentation impede understanding. The deliverable would not be appropriate to share with a professional audience.
Not Acceptable (0)	The deliverable is incomplete or unusable.

Dimension 5: Responsiveness to Feedback

Professionalism → Feedback Reception Evaluates documented iteration based on input received

A Change Log is submitted with your Project Deliverables documenting (1) the key feedback you received from employer check-ins and draft reviews, and (2) how you addressed each piece — or your rationale for taking a different approach. If no Change Log is submitted, this dimension is scored Not Acceptable (0).

Level	Descriptor
Exemplary (4)	The Change Log clearly documents feedback received and how it was addressed. Where feedback was not incorporated, the rationale demonstrates genuine consideration rather than dismissal. The final deliverable shows significant and thoughtful evolution from earlier versions.
Proficient (3)	The Change Log documents key feedback received and how it was addressed. Most substantive input from check-ins and reviews has been incorporated or acknowledged. Improvement from earlier drafts to final version is evident.
Developing (2)	The Change Log is present but incomplete or superficial. Some feedback appears incorporated but other substantive input is ignored without explanation. Limited improvement from earlier drafts.
Emerging (1)	The Change Log is missing or perfunctory. Little evidence that feedback was meaningfully engaged with. The final deliverable is not substantively different from earlier drafts despite receiving input.
Not Acceptable (0)	No Change Log submitted and no evidence of iteration.
